

# Drought Plan 2025: Appendix 13 – Security Statement

February 2026

This statement is to confirm that, I Will Rees, Security Manager for Dŵr Cymru Welsh Water, have examined (on 19th February 2026) Dŵr Cymru Welsh Water's Draft Drought Plan 2025, the Strategic Environmental Assessment of the Draft Drought Plan 2025 Environmental Report, the Habitats Regulations Assessment of the Draft Drought Plan 2025, and supporting documents.

Following this examination, I believe that the public domain documents, itemised below, meet the requirements of Chapter 9 The Handling, Storing and Sharing of Sensitive Information and Appendix E Information Routinely Published by the Environment Agency and Natural Resources Wales – Protective Security Guidance for the Water Industry – Version 5, July 2022 – DEFRA and Welsh Government and I am able to confirm that no Critical National Infrastructure sites are mentioned in the Drought Plan, the Strategic Environmental Assessment or the Habitats Regulations Assessment.

In coming to my view, I have noted that in one or two instances some highly generalised information on locations have been given in the public domain documents, which I do not believe can be construed as “locations and details” as outlined in the above. There are a number of appendices which we have not made publicly available as they contain operational information; these are listed in the “Non-Public domain documents” section below.
